

Team Sprint Planning Meeting Minutes

Date: 27 July 2026 2pm-2.30pm

Tutor: Annie

Attendees: Wen Sun, Indra, Shingu Li

Location: Hive

1. Meeting Overview

This meeting mainly discussed the course attendance requirements, the arrangements for Sprints 4–6, meeting minutes standards, team communication methods, GitHub document management, and preparations for Sprint 4.

Tutor Annie introduced the course requirements for this semester and learned about the team members' backgrounds, the current project progress, and the team's communication with the Client.

2. Attendance and Hive Requirements

On each Hive workday, two Check-ins must be completed on the check-in device:

Once in the morning, preferably before 11:00 or 11:30;

Once in the afternoon, usually at around 14:00.

Check-in is part of the attendance requirements. If a Check-in is missed, the Tutor should be contacted as soon as possible.

The team plans to use Port 4 starting next week. As Port 4 was occupied this week, another location was used temporarily.

The absent member is expected to return next week.

3. Absence Policy

All leave or remote work applications must be approved by the Unit Convenor.

Tutor Annie is not responsible for approving leave and can only assist in forwarding the information.

Leave request emails should:

Be sent directly to the Unit Convenor;

Include valid supporting documentation, such as a Medical Certificate;

CC the Tutor so that the Tutor can be informed promptly.

4. Sprint Structure and Assessment

The processes for Sprint 4 and Sprint 5 are basically the same as those in the previous semester.

By the end of Sprint 6, the team is expected to complete:

Poster;

Video;

Final Presentation.

The Tutor will provide further details about the final deliverable requirements around Sprint 6.

The first Tutor Meeting of each Sprint will mainly discuss:

Sprint Goal;

Sprint Plan;

The work arrangements for the following three weeks.

The final meeting of each Sprint will be the Sprint Review, during which the team needs to:

Present the completed outcomes;

Explain the challenges and difficulties encountered during the Sprint;

Discuss any issues that the Tutor needs to be aware of;

Report the current progress against the Rubric.

The current course assignment requirements and Rubric are basically the same as those in the previous semester. Any updates will be announced through Canvas.

5. Meeting Minutes Requirements

Meeting Minutes must be kept for all formal and informal project meetings, including:

Tutor Meetings;

Client Meetings;

Internal Team Meetings;

Meetings with other teams or relevant personnel.

Meeting Minutes must be saved and organised in the team documentation.

The meeting minutes should focus on recording:

Meeting Date and Attendees;

Key Discussion Points;

Decision Points;

Action Items;

Assignees;

Deadlines;

The person who proposed a suggestion or solution;

The final decision reached by the team;

The reason for making the decision;

The follow-up work that needs to be completed.

The team may use recording devices or AI tools to assist in preparing the meeting minutes, but consent must be obtained from all attendees before recording or using the relevant tools.

6. Project Overview

The team introduced the current status of the project:

The main work completed last semester included data selection, data cleaning, and Notebook setup.

The project uses text data from four countries:

Australia;

New Zealand;

England;

United States.

The data mainly comes from website articles and knowledge-based texts.

The data covers history, nature, and other knowledge-related topics.

The long-term goal of the project is to use this text data to train a language model so that the model can answer questions about the relevant countries, particularly Australia.

The expected final outcome is a trained language model.

Client Matthew previously attempted to train a small LLM, but the model had a problem with forgetting important information. Therefore, the training method may need to be adjusted or other work may need to be carried out this semester.

8. Client Communication

The team currently communicates with the Client mainly by Email.

The Client meets with the team face-to-face at Hive almost every Monday.

Important emails related to the Client should CC all team members whenever possible to ensure information transparency.

The Tutor does not need to be copied on all routine Client emails.

However, if the Client makes special requests that the team cannot handle, or if issues arise regarding communication, assessment, or task arrangements, the following should be contacted:

Tutor;

Support Team;

Unit Convenor.

The Tutor reminded the team to maintain continuous and professional Client Communication to prevent insufficient communication from causing the Client to fail to provide assessment or feedback in a timely manner.

9. Internal Team Communication

The team usually works together on the weekly Hive workday.

If the tasks cannot be completed that day, an additional Team Meeting may be arranged on Friday.

Meeting Minutes must also be recorded for all additional Team Meetings.

10. GitHub and Documentation

The team currently mainly uses GitHub to manage the project and documentation.

The Tutor will review the team's GitHub Repository next week.

GitHub should clearly contain the project-related documentation

The team needs to review the file organisation in GitHub

11. Sprint 4 Planning

The team plans to formally begin some of the main work next week.

The Tutor reminded the team that:

Sprint 4 has already started;

A Sprint Review must be conducted on the final day of the Sprint;

Even if the outcomes have not been fully completed, a Deliverable must still be presented;

If the main development work does not begin this week, the workload next week will be heavier;

The team should determine the Sprint Goal as soon as possible and arrange outcomes that can be presented during the Sprint Review.

The following preparation work can be prioritised this week:

Review the website, Notebook, and project materials from last semester;

Check whether the existing Meeting Minutes include Decision Points and Action Items;

Organise the GitHub Repository;

Check whether any Testing can be carried out in advance;

Inform the absent member about the meeting content;

Prepare to formally progress Sprint 4 next week.

14. Next Meeting Preparation

Before the next Tutor Meeting, the team should prepare:

A clear Sprint 4 Goal;

The Client's response or task instructions;

An organised GitHub Repository;

Updated Meeting Minutes;

The current progress of Sprint 4;

Preliminary outcomes or a work plan that can be presented during the Sprint Review.
